

EE 448 Lab Tachometer

Jessica Bader, Meghna Chandrasekaran, Katrina Choong,
Seth Noel, Kyle Zelnio

Client / Advisor: Matt Post

SDMay19-30, Tachometer

Executive Summary

The Problem

Project Plan

Requirements

Functional	Non-Functional
<ul style="list-style-type: none">● Perform all lab functions● 99% accuracy● Range from 100 to 2000 RPM	<ul style="list-style-type: none">● More cost-effective● User friendly● Documented sufficiently● Resistant to breaking

Use Cases

Student	ETG Worker
<ul style="list-style-type: none">● Change the COM port● Check the motor RPM● Use the ‘help’ button	<ul style="list-style-type: none">● Mount the tachometer● Test the mount stability● Load the software

System Design & Development

Design Plan / Objectives

GUI

Microcontroller

Sensor

- Satisfy all requirements
- Approval from all user groups
- Field testing

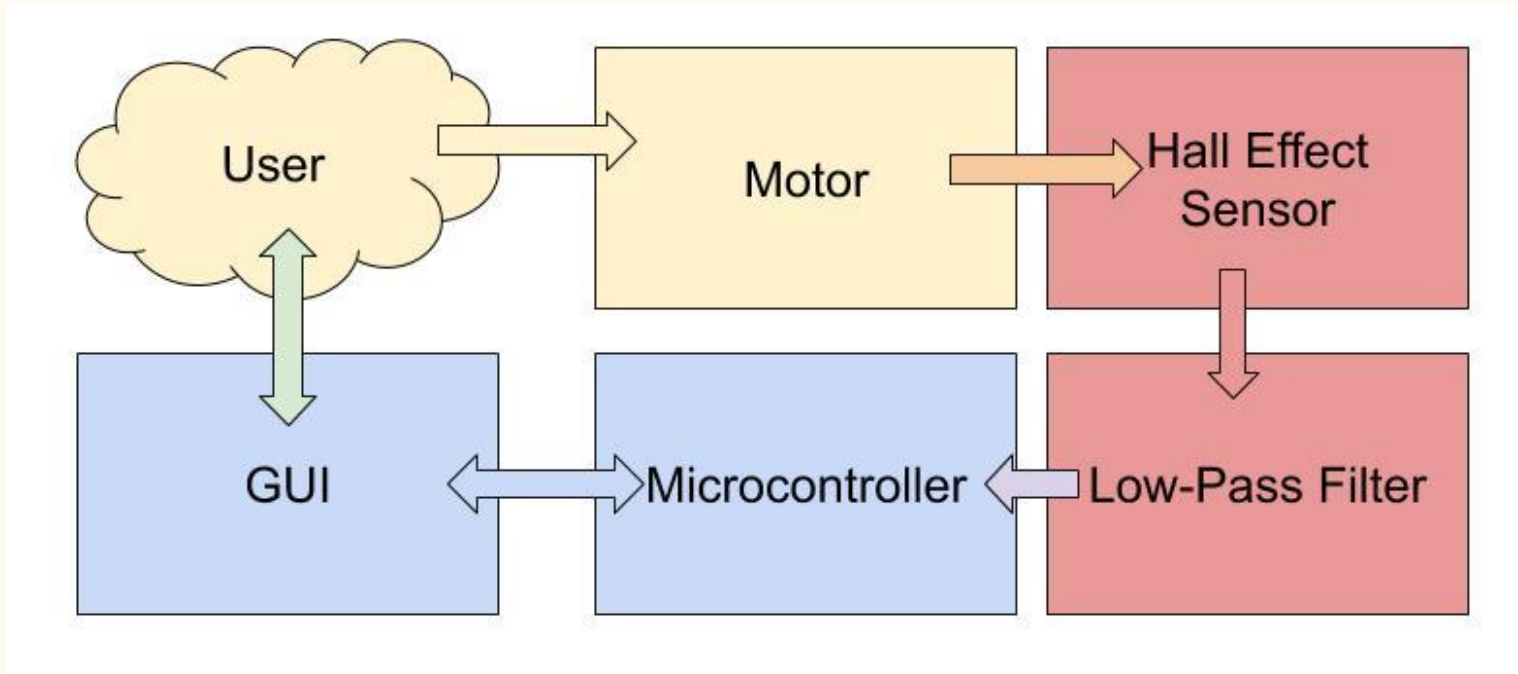

System Constraints

Assumptions	Limitations
<ul style="list-style-type: none">● Used by two students● Used in the EE 448 lab● Lab/lab setup will not be drastically changed● Students will refrain from touching● The lab computers run on Windows	<ul style="list-style-type: none">● The RPM should only go from 100 to 2000 RPM● The size of the tool should be no larger than the motor it is evaluating● The cost to produce the end product should not exceed \$500

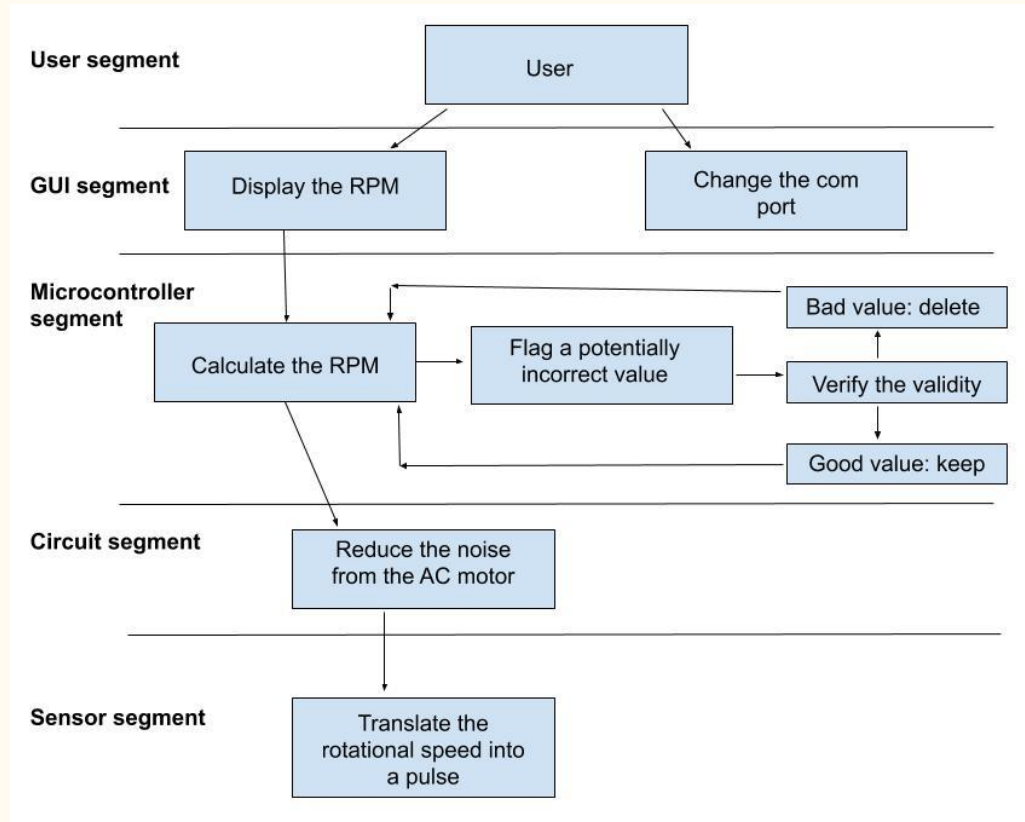

Design Trade-Offs

<p>Optical Encoder</p> <ul style="list-style-type: none">● Fast, easy● Expensive	<p>Low-Pass Filter</p> <ul style="list-style-type: none">● Cheap and easily accessible● Requires time to design
<p>Tiva Board</p> <ul style="list-style-type: none">● Started here● Need to rewrite	<p>Arduino</p> <ul style="list-style-type: none">● Easy to code fast● No previous experience
<p>Java</p> <ul style="list-style-type: none">● Previous experience but required learning new, unfamiliar functionalities	<p>Python</p> <ul style="list-style-type: none">● Client suggested● Limited previous experience

Design Block Diagram / Description of Modules / Interfaces

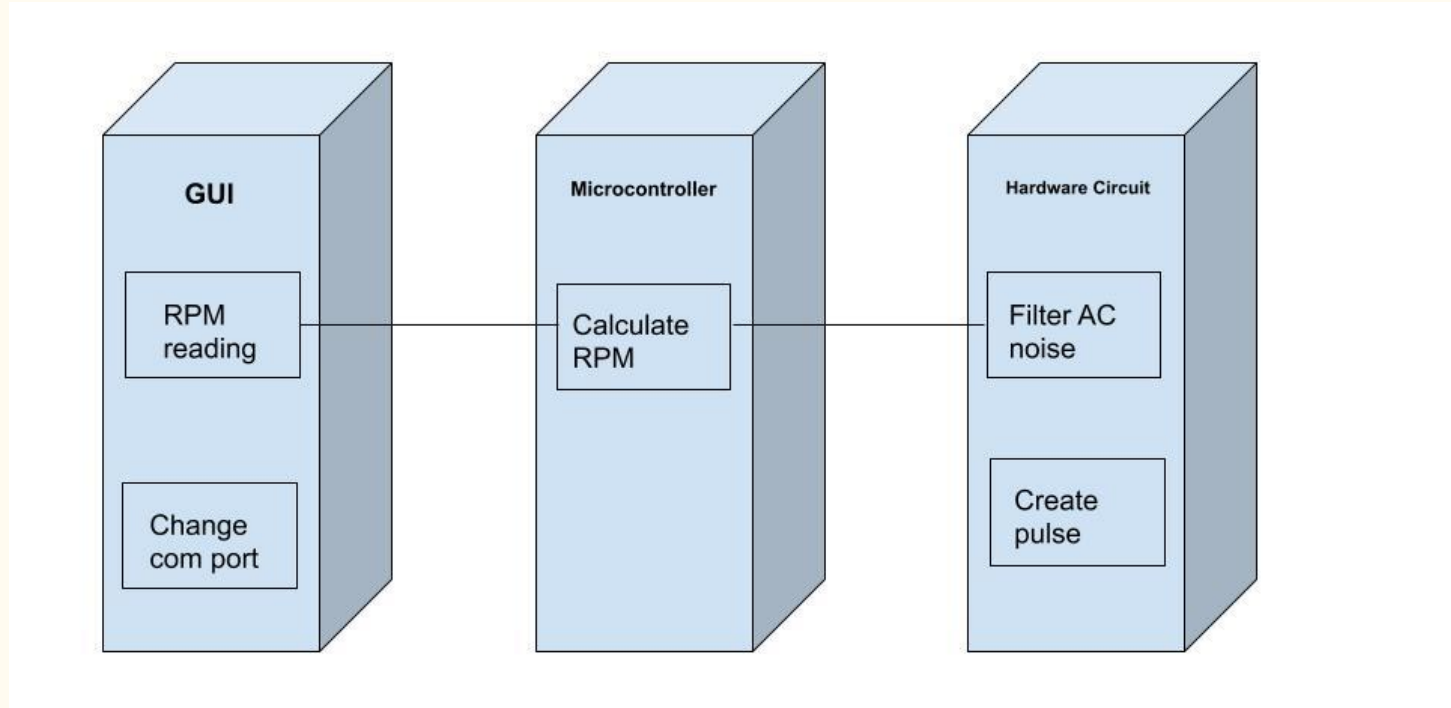

Architectural Diagram / Constraints

- GUI
- Price
- Motor
- Lab

Implementation

Implementation Diagram

Technologies / Software Used and Rationale

GUI	Microcontroller	Hardware
<ul style="list-style-type: none">● IDE: PyCharm● Libraries: tkinter, serial, PyInstaller	<ul style="list-style-type: none">● Microcontroller: Arduino Nano● Language: Arduino	<ul style="list-style-type: none">● Filter: Low-pass● Sensor: Hall effect● CAD: SolidWorks, MultiSim

Standards / Best Practices

- IEEE Standard for Software and System Test Documentation
- IEEE Standard for System, Software, and Hardware Verification and Validation
- IEEE Guide for Selecting and Using Reliability Predictions Based on IEEE 1413
- **Peer Code Reviews**

Testing, Validation, & Evaluation

Test Plan

- All manual tests
- Unit, Interface, System Integration, and Field testing
- Focus on linking to requirements

Unit Testing / Interface Testing

Unit	Interface
<p>(Software) Function Requirement #4:</p> <ul style="list-style-type: none">● GUI for user interaction	<p>(Hardware) Requirement:</p> <ul style="list-style-type: none">● Hardware output a pulse should be clean and consistent● With 0.5% accuracy● From 100 RPM to 2000 RPM
<p>(Hardware) Requirement:</p> <ul style="list-style-type: none">● Hall effect sensor will create clear pulse	<p>(Software) Requirement:</p> <ul style="list-style-type: none">● Calculate RPM with 0.5% accuracy● From 100 RPM to 2000 RPM

System Integration Testing / Field Testing / Validation and Verification

System	Field	Validation and Verification
Functional Requirement #2 & #3: <ul style="list-style-type: none">• Accuracy of 99%• From 100 to 2000 RPM	Non-Functional Requirement #2: <ul style="list-style-type: none">• It will have a user-friendly GUI	Non-Functional Requirement #1: <ul style="list-style-type: none">• Cost effective
Functional Requirement #1: <ul style="list-style-type: none">• Perform all lab functions.	Non-Functional Requirement #3: <ul style="list-style-type: none">• It will be documented sufficiently	

Evaluation

- Meets all requirements
- Client, student, professor, and TA approval
- **88%** cost reduction
- **80%** time reduction
- Removed direct user/motor interaction
- Rated **9.5/10** for ease of use

Project & Risk Management

Roles and Responsibilities

Role	Member
Hardware Team	Kyle, Katrina, Seth*
Software Team	Meghna, Jessica, Seth*
Systems Engineer	Seth
Testing Team	Meghna, Jessica, Seth
Timeline Manager	Katrina
Communication Manager	Jessica

* refers to member holding this role for a partial semester

SDMay19-30, Tachometer

Task Decomposition

Task	Team Member(s)		Task	Team Member(s)
GUI creation	Jessica, Meghna		Mounting	Katrina, Kyle
Arduino programming	Jessica, Meghna		Low-pass circuit design	Seth
GUI/Arduino interface	Jessica, Meghna		PCB Design	Kyle
Software testing	Jessica, Meghna, Seth		Hardware testing	Seth
Picking/ordering components	Seth, Katrina, Kyle		System-level testing	Seth, Meghna, Jessica

Project Schedule

Tachometer																	
ACTIVITY	PLAN START	PLAN END	Weeks														
			11	12	13	14	15	16	17	18	19	20	21	22	23		
Re-evaluate design to add hall effect sensor	14-Jan	28-Jan															
Safety Training with Lee Harker to maintenance shop	28-Jan	3-Feb															
Write Arduino code to take input and note change between pulses to calculate RPM	28-Jan	3-Feb															
Take measurements of spacing in lab. Create mock mount for sensor	3-Feb	10-Feb															
Create GUI	3-Feb	10-Feb															
Test max and min distance of sensor. Create 3D model of sensor mount	10-Feb	18-Feb															
Connect microcontroller to GUI	10-Feb	18-Feb															
Adjusted sensor to fit more properly and added height adjustments	18-Feb	24-Feb															
Connect microcontroller to GUI (Continuation of last week)	18-Feb	24-Feb															
Add adjustments to sensor mount. Sketch arduino mount and implement in Solid works	25-Feb	24-Mar															
Test software component for accuracy	25-Feb	24-Mar															
Design a fork mount to in	25-Mar	31-Mar															
Implement code bug fixes as found in testing	25-Mar	31-Mar															
Rework fork mount and arduino mount	1-Apr	7-Apr															
Allow the user to modify the com port	1-Apr	7-Apr															
Create low pass filter to fix noise coming from AC motor	8-Apr	14-Apr															
Create an executable file for the GUI	8-Apr	14-Apr															
Test in 448 lab with students. Receive feedback of design	15-Apr	21-Apr															
Solder lower pass filter and arduino on board. Create hardware for all motors	15-Apr	21-Apr															
Make sure software is up to date	15-Apr	21-Apr															
Update documentation	22-Apr	3-May															
Feedback given is implemented into final design	22-Apr	3-May															

SDMay19-30, Tachometer

Risks and Mitigation

Anticipated	Actual
Shipping time for parts	Shipping time for parts
Redo design and implementation	Testing software without hardware
Redo our documentation	System needed to be mounted securely
Work on hardware and software at the same time	System would not be documented well enough to maintain in future

Lessons Learned

- Test in the environment early
- Check with first to third party users early
- Order parts early

Conclusions

Closing Remarks

- Met all requirements
 - Client, student, TA, and professor approval
 - Less cost
 - Higher durability
 - Save time

Future Work

- **Use the GUI to control the motor**
- Set the microcontrollers to the same port
- Put the program icon on the desktop

System Accuracy Graph

Student Feedback

Feedback	Status
Add 'help' button	Done
Do not use 'start' button	Done
Get rid of junk values that come up on start	Done
Move executable file to desktop	In-Progress
Make the measurements faster	Declined
Have more accuracy (1 RPM instead of 6 RPM)	Declined
